**Story Science, Planet Solutions To Plastics, Data Collection, and Sustainable Development initiatives for any industry are among the Courses & Exercises, Webinars and Seminars being offered in preparation for the Post Pandemic Planet by the GloCal Knowledge Pot.**

Example"

## ***Collecting Data on Plastic Pollution In Our Communities***

Dr Kris Rampersad Glocal Knowledge Pot Academy Global Local Caribbean [www.krisrampersad.com](http://www.krisrampersad.com)

## Who

Quarantined, or avidly practicing social distancing in them midst of the COVID-19 Planet Pandemic?

Story Science experiments. Prepping next generations for the Post Pandemic Planet at the GloCal Knowledge Pot with National Geographic educator Dr Kris Rampersad

Here's something you can do to meaningfully impact your home, community, country, and indeed the planet.

This is for persons from ages 3 to 103. Pre K- plus: Continuing/Ongoing Education: Formal, Informal and Non-Formal Sectors Children ages 3 to 103 Educators (all Levels from preK) Change Agents, Community & other Leaders, Policy & Decision Makers, Train the Trainers, Sustainable Community Development Planners, Leaders, NGOs.

## Objectives

- To inspire participants to drive action for change, beginning with adjusting their own lifestyles for in their homes and communities for more conscious actions to reduce plastic use and pollution.
- To enhance the data bank of information on plastic use and disposal.
- To develop participant s' skills in data collection, critical analyses and use for informed decision making and effect long term attitude and behavioural change in use of plastics and non-biodegradable substances
- To increase understanding about the harmful effects of use of plastics on the environment
- and empower communities and authorities to act against plastic pollution and institute plastic reuse and recycling, inspired by children
- *Why collect data in order to affect positive change?*

Participants can make an impact on national and regional scale by adjusting their own actions and habits, owning responsibility, taking charge and driving conscious actions from within their homes and communities into awareness and understanding about responsibility. In this way, their actions can influence parents and elders as leaders and decision makers at home, in the community, in industry and at national and regional policy levels.

### ***Why is it important for you, your children, students or employees to learn about plastic pollution in your community?***

While there is general awareness of plastic pollution as an issue, few realise how close to home it is and how adjusting individual consumption habits can impact broader changes in community and society. This focusses on sensitising and adjusting the attitudes and actions of next generation leaders and decision makers about the growing indiscriminate use of plastics and arbitrary disposal. As a largely agricultural and ecological rural district, the impact of plastic accumulation on soil quality and can directly affect sources of income and sources of food. Additionally, the main focus of national recycling programmes are in the urban centres and less emphasis is placed on rural communities. Participants can drive the community actions for greater involvement and inclusion of rural districts in national programmes.

It is also meant to cull skills in gathering sound information in support of their causes.

To cultivate their community and social consciousness.

To help shape their outlooks as responsible and empowered citizens.

To prepare them as next generation of leaders to awareness, understanding and change.

To influence and change the behaviour of adults, parents and leaders.

Data is an important tool in civic action for change. The process of data collection is itself a mechanism for building awareness and growing consciousness. Additionally, it is an empowerment tool that it provides the information and evidence to drive action and policy and legislative change. The data collected will be used for lobby and advocacy to increase awareness and understanding about use of plastics and promote more conscious attitudes

and behaviour to plastics use, reuse and recycling and repurposing. It will be used to inform education and other policies in the community.

## What standards will learners be addressing?

This aims to integrate and align intangible with tangible elements of lifelong learning such as *Consciousness building, Values, Character and Citizenship Education* components of the education system in informal service learning in any setting inside or outside schools, homes and community involving youths and the young at heart ages 3 to 103.

Other Courses include InterCultural Education for Inclusion, Respect and Understanding of Heritage and Cultural Diversity.

**The OFFICIAL Commemorative Keepsake of the 50th Jubilee Anniversary of Independence**

More Creative Learning Opportunities. More Partnerships. **LiTTscapes**

**Landscape of Fiction From Trinidad and Tobago**  
by Kris Rampersad

- Full colour, easy reading, coffee-table-style
- More than 500 photographs of Trinidad and Tobago
- Focus on some 100 books by some 60 writers of T&T
- Intrigue real life & fictional details of island life
- Details exciting literary moments, literary heritage
- walking tours & cross country excursions
- Essential companion for travel & heritage enthusiasts, tourists, students, policy makers, academics, readers
- Features works of Nagai, Walcott, Seckau, Sissoondath, Lakshmi Seetaram-Persaud, Shani Mootoo, Kamaljit Kojmer, Kenneth Khan, CLK James, Robert Antoni, and many more...

No one book can set out to achieve everything that a text can do for its people and its nation, but whatever you say one book can't do, this one almost does it... *LiTTscapes* is a work of art, but also a documentary, a travelogue, a critical work with visual and literary power... an innovative approach to literature bringing it alive in description of landscape, life, culture and people... considerable visual beauty, what Derek Walcott calls, "visual surprise"... impressive coverage of social history, geography, and politics... a survey of Trinidad's landscape and of its literature

— *Professor of Creative, Gayatri Prasad, University of Guyana*

Little, if any, of local landscape and culture is omitted... Rampersad draws readers to the real-life landscapes, landmarks and cultural institutions that forged the literary imagination of local authors... bridges the gap between fiction and reality, painstakingly mapping the spaces... successfully charts a path towards deeper understanding of not only the literary works that define us, but also the authors and their multifaceted inquiries.

— *Zuhra Gordon, Trinidad Guardian*

... a book worth having... a great introduction of Trinidad and Tobago and our literary output and cultural heritage to the rest of the world.

— *Dr. Rhonda-Joy Thomas, former Principal, University of the West Indies, Lecturer in Caribbean Literary/Minister of Planning and Sustainable Development*

... an opportunity to commit to our own literary tours, to celebrate our literatures in our schools, in our communities as a necessary prerequisite to our development, to heal our self-schism

— *Paul Fintus Springs, National Port Laureate, Trinidad and Tobago*

... so well crafted, can be an inspiration to other young writers. It provides a most useful blueprint for stirring or buttressing a programme of self-discovery, local and foreign, tourism and entrepreneurship, among a number of other avenues for sustainable development in our country.

— *First Lady of Trinidad and Tobago, Her Excellency Dr. Ivan Ramphal Richards*
